- Git/Github

PROJECTS

• Graduation Projects Management System

is a project that aims to develop a system that facilitates and organizes the process of managing and following up graduation projects in universities and educational institutions. This system aims to provide various tools and features for students, supervisors and academic administration to enhance the efficiency and quality of the graduation projects process

• Multi Vender Store

A multi-vendor store website is an electronic platform that allows a variety of vendors to display and sell their products in one place. The main idea is to provide a unified shopping interface where customers can choose products from different vendors without having to visit multiple sites. These stores provide advantages for both sellers and buyers.
